Email: [REDACTED]

General Comment

I'm an American citizen. I don't think there is any future for artificial intelligence in America. Americans are intelligent enough on their own. We are not going to make America great again by depriving people of every chance to employ critical thinking skills and replacing that with machines that will spit out cobbled together nonsense based on algorithmic input compiled from data that has been stolen anyway. Americans are sharp, smart, creative, innovative problem-solvers. They are law-abiding and respectful. We don't need machines to make us lazy, and we don't need machines that can only learn by thieving legally protected copyright materials to do it, either. Make people use their own minds and do their own work. Delving into artificial intelligence is a waste of time and money.
