

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-xfp2-ktw9
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4397
Comment on FR Doc # 2025-02305

Submitter Information

Name: Kim Pinkham
Address: United States,
Email: [REDACTED]

General Comment

I oppose allowing AI companies to use existing writing, art, music, code, or other human-made intellectual property for any reason without the consent of the creator of the property. To allow that is state-sanctioned theft, and will cause legitimate artists and writers and other creatives to stop sharing their gifts, and will spur the creation of anti-theft technology that will be used to poison the data sets of AI models and destroy them. This is already happening; tools to add coding to electronic writing and art already exist and have a devoted following. Even without those poisonings, AI is a flawed tech that actively hallucinates data and blurs the line between truth and fantasy; it has already killed people as a result (see AI-written mushroom collecting guides.) The current pursuit of AI is aimed solely at replacing human workers with 'robots' so that multi-billion-dollar corporations can shave a percentage point off their bottom line by reducing their work force, driving a race to the bottom for human workers everywhere. IF AI companies want to pay creators for their work and obtain consent for their use, fine. If they misuse a creators content they should be subject to litigation, just like any ownership dispute in the physical world or copyright dispute in publishing.

AI is not the place the USA should be investing its energy and innovation in the first place; that should be directed 100% toward mitigating the disastrous and accelerating effects of climate change. Instead, AI exacerbates that problem by consuming obscene amounts of electricity and water in order to replace human workers with inept, hallucinating, glorified auto-correct programs. The USA can do so much better, and if AI companies want to continue to work on their products despite its obvious flaws and lack of compelling use cases, it should have to assume all the costs of that choice and its fallout.
