General Comment

AI is not good at all.

Aside from the (dangerous, at times) misinformation it spouts, creative industries may fire a lot of their workers. That prevents human art from flourishing, leads to higher unemployment, and heavily reduces the quality and impact of art. Other images it creates can also be used to defile or spread misinformation about others.

AI should especially not be used in decision making, as a computer cannot be held accountable for its actions. I do not believe it should be used for security either, as it is possible to train it with a racial (or similar) bias.

Scraping also relies on stealing personal information and/or intellectual property in order to function. I value my privacy, and I guarantee that I'm not alone in that. Copyright laws exist for a reason, and voiding them for an industry reliant on theft (and energy over consumption) is inexcusable. Terrible. Horrible. The rule of law should be respected by everyone, with no exceptions. And especially not for thieves.
