General Comment

There is no reason to let OpenAI use copyrighted material to train their AI. There is no reason to give them special permission to violate copyright and steal the intellectual property of individuals and corporations to develop a product that nobody wants. AI does not have a place in the future of the US; it is a threat that steals jobs, materials, and consumes a ridiculous amount of energy for a product that is being shoved down the throats of customers never asked for it.

If any other industry said "we need your product to develop ours, but we don't want to pay for it... can you just MAKE people give it to us?" they'd be laughed out of the room. Doubly so if it's a product that has very little use cases other than putting actual hardworking people out of their jobs. It's ridiculous that this is even being considered; although I'm sure they're greasing the pockets of many people working for the current administration for this to even be an option. Don't sell out your citizen's intellectual property for a some extra campaign bucks and the vague, empty promise of a product that can maybe possibly help people one day in the far future.
