Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4508

Comment on FR Doc # 2025-02305

Submitter Information

Name: Brett Risberg

[REDACTED]

General Comment

Generative AI will negatively impact the quality of everything it is put into. Everything will begin to become homogeneous and generic. As a Graphic designer this has greatly effected my field leading to less work opportunities in favor of cheep meaningless products. AI will also impact people's creative outputs and make things have less meaning. Art has always been an important part of expression and voicing political grievances and the homogenization of AI will take the meaningful impact out of things. AI will also greatly impact all work fields with workers being replaced by artificial intelligence leading to mass layoffs as have already been being seen all over. AI is primarily used by corporations to make a quick buck without any thought into the greater negative impact it will have on the country. AI is dangerous and needs to be regulated and peoples rights need to be respected. Most AI is largely trained off of illegally stolen work and should be treated in the same way as any form of theft.
