General Comment

Allowing copyright exceptions for AI training will do more to harm Americans than help them. AI can only copy the works of what it is trained on. Therefore, works created by AI will be worse versions of things that already exist. However, by allowing the writing and artistic work of hard working Americans to be used for AI training, the goal of the adoption of AI is to drive them out of the market while replacing them with worse outputs. The net result is that it will be harder for Americans to work in artistic fields and our country's artistic and cultural output will fall behind that of other countries.
