General Comment

Hi! The only world that AI has any place in is the one that a small, tiny fraction of a fraction of humanity dreams of. One where people's creativity is suctioned and gobbled up and regurgitated back out for the lowest possible effort and highest possible profit, with absolutely zero care taken. It's a mockery of the human spirit.

As I believe the point of this is to decide whether or not to allow big AI to be trained on copyrighted data, I'll also bring up the fact that in ANY other circumstance, there would (or should) be MASSIVE punishments dealt out for using copyrighted material in this way. Especially any individual person doing it on their own and using the material of a massive corporation. Why should these corporations get to skirt the rules? I'm absolutely livid that they even have the AUDACITY to think they deserve special treatment here, and I'm trying my hardest to keep this text box as clean as I am. Absolutely no consideration should even be given to the possibility that these parasites are given carte blanche to the entirety of human history and creativity just so they can create ghostly, lifeless facsimiles of it. AI should be so heavily regulated, disregarding the harm to creativity that it poses for a moment, considering the extreme environmental effects alone.

All of that said and all that anger expressed, I thank you for taking the time to take these comments into consideration. Hopefully my words are powerful enough to have even the tiniest sway.
