General Comment

While I am not vehemently opposed to certain progress and achievements made by further development of artificial intelligence, I implore lawmakers to put what's best for the people first. That is, protecting people's intellectual property, their right to privacy, and even their own identities. Too many times has certain generative A.I. projects been used in bad faith, whether to obtain the creative works of others to train models without their consent, certain "deep fakes" made to imitate, impersonate, or otherwise exploit a person of ANY status or class for unjust reasons, or to use these systems to make life more difficult for the common American. While innovation is a wonderful thing, and we should encourage it, safeguards must be put in place, not to deter progress, but to make sure progress stays on the right track for the good of ALL people, not just for those of a certain status. This is a powerful tool, increasing with power day by day. We need to make sure it is used ethically, lest it let those in bad faith to continue working in bad faith.
