Submitter Information

Name: Marisa Miller

General Comment

Hello,

I write today from several perspectives. First, as a citizen, all companies involved with AI must be regulated with accountability to preserve and protect the data and privacy of that data for every citizen and all groups. As an educator, companies involved with AI must be prevented from stealing ('training AI' is stealing if the company does not have permission to use the material) materials and incorporating inaccurate and disinformation sources. Too many of the students I deal with are exposed to profoundly wrong and false, often entirely made up, material. The source of these terrible outputs are derived from garbage information as source material. As a writer, I require our government to ensure the strictest standards for the use of materials for 'training'. Opt-in should be the only standard and failing that, all companies involved with AI should be restricted from using copyrighted sources and the significant efforts of individual people who do not create art, writings, curated information, and so for the indiscriminate and illegal taking by AI companies. I have heard that CEOs of AI companies have said their product cannot be profitable if they have to pay people for their materials. That is not the government's problem. What is the government's role is to ensure copyright, data privacy, the right to the chosen use of a person's own work without it being copied and used without permission or recompense, and all other activities are protected for individuals, groups, and businesses.

Sincerely,

Marisa Miller
