General Comment

OpenAI has shown time and time again that it is a tool used by con-artists and scammers, built off of material that it steals from hard-working, honest people. Its models are trained by scraping images from whatever sources it can, consistently done without the permission of the creators of those images. If generative AI like OpenAI cannot function without needing to steal from the honest work of others, then it should rightly and properly be doomed to fail and be destroyed.

This version of "Artificial Intelligence" is just a waste of time and resources, and encourages its users to be under-achieving, lazy, and thoughtless. To enable generative AI to more easily commit the acts of thievery that its foundation is built on is to perpetuate that same laziness. In an era where even critical thinking is at a low, I would hope that we could at least encourage people to put in the effort to make, at bare minimum, a pretty picture in the absence of a coherent and reasonable thought.

Moreover, when any person or company publishes media generated with these wasteful "AI" tools, it is now the emblem of either a lazy and stupid individual or a cheap product worth avoiding. The nation could only be so kind as to save businesses the willing disgrace of implementing AI-generated images in their products and works by weakening and doing away with generative AI altogether.

While this comment has contended largely with generative AI as an image production tool, the track record for its use in other forms has been unsuccessful because it is a failed concept on a foundational level. Even in Google's implementation of AI in its search results, it consistently will provide blatant misinformation or misunderstand the subject at hand. As a chatbot too, it has only done harm or has strayed from its intended purpose when implemented.

Whatever push there is for "Artificial Intelligence" to be used in these various fields, it is not motivated by the bettering of society but by greedy businesses that seek only to fatten their wallets at the expense of the public at large.
