General Comment

I am sending this comment to say as an artist and academic that I am very much opposed to removing restrictions on regulations, especially copyright restrictions to train AI. As of now, companies like OpenAI have failed to prove that generate a public good that elevates them above the regulations that the rest of this country must obey.

It's clear that AI corporations have the potential to reap enormous profits off the labor of others without their consent or their benefit. Furthermore, there is no clear guarantee that data will be handled in an ethical or responsible manner, with involved parties not even knowing how their information is used.

In addition, current AI demands place an extreme burden on our already underdeveloped infrastructure, harming communities who often have no say in their installation (see data centers).

I implore the administration to not only keep current regulations in place, but to further restrict these companies abilities to access resources without fair compensation.
