General Comment

As an artist myself, I do not think generative AI should be given special exception to use copyrighted works. This would basically destroy independent artists and be a huge blow to creativity as a whole as corporations would no doubt exploit this legal loophole to eliminate human artists from industry all together. It is already hard enough as it is for creative professionals without machines ready replacing us, especially ones that only can learn from human artists to begin with. Until actual regulation and oversight can be implemented on this new technology then it cannot be allowed to grow without check. This will only lead to it hurting the economy and massive lost of talented workers.
