Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4611

Comment on FR Doc # 2025-02305

Submitter Information

Name: Frank Lindon

General Comment

As has been demonstrated time and time again, generative AI is a heavy money-sink technology that has had little to no beneficial impacts, with the heavy energy cost just to operate it vastly disproportionate to the so-called quality of whatever it even outputs. Its most prominent users like OpenAI have admitted they've needed to scrape other peoples' work without any form of compensation in order to stock up on data, and this action plan does nothing to address that - rather, it only serves to embolden them to do it more at the expense of every single American creative, big and small. Once again, along with much of this administration's orders, it only abandons the people it claims to benefit.

And beyond that, it has only been a few years since it really "took off" as a fad, and already in the eyes of most Americans generative AI's usage has become synonymous with laziness, uncreativity, thievery and wastefulness. For much of the general public it is a weight that drags down every production and program that uses it. Allowing this kind of system to roam unchecked with this kind of plan will only serve to harm America's image in the technology space rather than enhance it.
