General Comment

I think that this action to give companies more broad access to content to train AI is a bad idea. There are some facets of Generative AI that companies would rather the government overlook. For GenAI, this includes learning from copyrighted works such as but not limited to artists around the globe, and these artists are not being fairly compensated in the construction of this tool. Other areas of AI may progress, but the sweeping requests being made by corporations are being made without consideration for the people that it affects. The impact that AI could have in replacing human jobs is also a major concern seeing as how basic machines have already made workers obsolete in some areas, and these workers are not fairly assisted or trained for finding new work. Unregulated AI will exacerbate the problem.
