General Comment

Any AI Action Plan needs to include regulation of AI technology, the proper compensation for the use of copyrighted works in training AI, and the ability for users to opt-in to AI services. Currently, tech providers are turning on AI features and services which users then need to opt-out of. This should be reversed, especially given the many ethical concerns people have over AI use. Users should be able to opt-in and otherwise use software without the AI without the need to take additional steps to protect their data and avoid using AI. Companies that train AI on artwork, images, and written works should pay for the rights to those works and creators should be compensated or able to refuse for their works to be used in training AI.
