General Comment

It is important that AI technology, both its training and use, does not infringe upon the copyright of any individual or company. Individuals and companies need strong protections to prevent the media they create from becoming part of AI models without their consent or authorization, and there needs to be a legal pathway to punish AI operators who break this protection. Without this protection, what reason do any of us have to continue creating anything? Anything we create would just be stolen and regurgitated by AI models. Rather than remove "unnecessarily burdensome requirements," we need much stronger ones so that we can all choose whether to participate in this new technological frontier or not.
