General Comment

As a software developer and content creator, my main concerns are the following:

1. Conserving traditional art forms and preventing AI from iterating on artists' work without their explicit consent. Websites should not be able to suddenly start selling artists' images to machines in order to create the next million-dollar movie.
2. Ensuring any AI created lessens its impact on our electric and other resources. I'm personally fine with AI, but current AI models are extremely wasteful. The public cares, and many will boycott AI if it's not improving on its efficiency. Being efficient with resources was required to get us to the moon; being efficient will determine the long-term impact of any governmental finances related to AI.

As long as those two principles are followed, I can personally support funding AI programs.
