Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4659

Comment on FR Doc # 2025-02305

Submitter Information

Name: Nathan A

General Comment

As far as AI training goes, there is absolutely no need to have access to the works of people who depend on that work for their livelihood and/or the progression of the companies they work for. Anything they would need for training is already available in the Public Domain. It's an immense amount of data and material that could fuel the development of any AI training system. With so much information already available, it stands to demonstrate they simply want access to material and information of the American people to aid their primary forms of business aside from AI training. And they want it for free at the expense of the government and the American people. Doing this will only hurt the US economy at a time where it's already a fragile thing. We need to build up more jobs to strength the nation, but this sort of AI training will only take jobs away. Let them train their systems on public domain material, it's already open to them and won't cost America anything to just leave it at that new works and data are entered into the Public Domain every day, it's ever expanding. There just aren't any good reasons to give access to the work of American's and the work of companies that together power our economy. Please do not let this happen.
