General Comment

With its intensive resource consumption, generative AI does not have a place in the future of the US, particularly in the artistic fields. It steals from the livelihoods of Americans and profits off of that theft. Nobody could get away with infringing on intellectual property the way generative AI does, and AI should not be permitted to do so. Generative AI's place in the workforce and economy is both unjust and untenable; it will run its course and fall into obscurity. It needs to be curtailed in the process to prevent it from doing even more damage than it has already done.
