General Comment

AI is the enemy of innovation. True innovation is borne from people. What a disincentive to creating, knowing their intellectual property has no protection from large corporations sweeping it up en masse to feed to their plagiarism machines! AI hurts American creators--myself included--and by extension all Americans.

Public interest in AI peaked. The industry is dying. Money thrown into it is completely wasted. Allowing this circumvention of intellectual property rights only lets a dying beast flail longer, damaging other industries and individuals in its death throes.

There are so many other ways in which America can and should be encouraged to prosper, to innovate, to shine. This is not one of them. Let us be known for our creativity, or ingenuity, our business acumen, not a need to steal to make even substandard, lifeless, inaccurate works, whether in art, journalism, computer science, psychology, or many others.

We are better than petty thieves. This is not the beacon to light for our country. It will only stifle innovation, weaken us, and lessen our standing in the world.
