Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4683

Comment on FR Doc # 2025-02305

Submitter Information

Name: Alex Koppel

Email: [REDACTED]

General Comment

As a software engineer, I do not believe that AI development should be exempted from copyright laws. I have worked closely with AI systems and developed AI products, and have not yet seen anywhere close to the capability or reliability that would be needed to so revolutionize our economy that we should undermine the rule of law for it.

I have, however, seen the harms that these systems have done to the American workers and American creators who power our economy and the culture that is a pace-setter for the entire world. Our copyright laws set a valuable balance to preserve the creative works of software developers, writers, artists, and more—AI development (just like any other American product development) should have to respect that balance. If AI cannot be or has not been built without infringing on those laws and rights, that should be a matter for the courts to work through.

Thank you very much.
