General Comment

Artificial intelligence poses a threat to the livelihoods of creators in the United States, and to the creative intelligence and competence of the country's citizenry. AI profits from the theft of copyrighted works and negatively impacts the ability of creative people to make even a basic living. As a writer, I find AI to do more harm than good, and my own income has been effected. AI is being developed too quickly, without reasonable forethought to necessary guardrails (and legal recourse for those harmed) going forward. It is a grave mistake to continue pushing forward with AI in the absence of strict regulation and close monitoring, as well as the absence of legislation to protect work created by actual human beings.
