General Comment

Dedicating Americas infrastructure to AI is going to cripple our power grid for the sake of pile of fools gold. Do you remember NFT's? Do you remember Zuckerberg claiming he was going to bring about a Matrix style VR world revolution?

Do you remember beanie babies?

Do you remember the Tulip Bubble?

The American economy is already being hamstrung by the dumbest trade war this country has ever seen and on TOP of this, you want to dump all of our remaining resources into something that uses up the same energy as entire cities to create the ugliest art, the most broken code, the most poorly written literature, the most inaccurate data it can.

AI is a snake oil that has empty headed executives convinced it can replace millions of artists, writers, programmers, researchers, and journalists. It can't, but the people with the most stock invested in AI as a whole are paying good money to convince them it can. In the meantime millions of Americans will be put out of work for the sake of half baked garbage outputs and our electricity bills and water bills will skyrocket because of the demand the servers running this nonsense.

When utilities costs skyrocket, silicone valley runs out of drinkable water, and the unemployment rate balloons out of control I will personally be breaking down the door of EVERY politician who allowed this to happen.

Fix this. Now.
