General Comment

"AI" is a sham and a gimmick that steals from writers and artists and requires an obscene amount of resources that are doing real damage to our planet. Any potential benefits from generative AI (outside limited applications in data research and medical spaces) is not worth the irreparable harm it causes to people's livelihoods and the environment. If something sounds too good to be true, it probably is, and the fact that it is being FORCED on us by major corporations and data companies -- who historically do not have the best interests of consumers and the world in mind -- tells us this is not worth investing in. They only care about getting as much content as they can as cheaply as possible, and lining their own pockets.
