## General Comment

AI is at best a waste of money and at worst is actively harming individuals who create, and truth be told it does both at the same time all the time. We need more protections for artists and creators who are targeted by people who "use" AI, not less. Destroying copyright just so big AI corporations can milk what little art they have not been able to get their hands on is not a good idea. At best, this will not effect massive corporations like Disney, and at worst, everyone else in the world will stop interacting with the USA because of the new copyright laws. Why would you interact with a country that is going to actively steal everything you show them? If we get rid of copyright protections so AI companies can make more money, we're going to become the new Russia for the rest of the world, a danger to everyone else to the point where everyone will hate us unless we buy them.

Pretty much: if we allow corporations to do whatever they want with AI, then everyone is going to hate us and we will be killing artists/creatives. Nobody actually wants this, some say they do, but they really don't.
