General Comment

Companies need to be held liable for any harm their AI does. Generative AI also needs to be thoroughly regulated, it shouldn't be trained on any stolen content, I worry that there'll be bad actors that use video/image generation to spread harmful misinformation (especially for political reasons), and advertisements made using AI might falsely represent the products/services (I've already seen AI generated ads for AI chat mobile apps suggesting you can date underage copyrighted characters). I don't want AI everywhere, I really don't want to see AI used for anything creative, I have no power to stop that, but if it's going to happen, at least put some effort into regulating it. Ideally we'd also get more data protection, cause we barely even have any of that as a country, but that'd be against companies like X's best interests, so I have no faith that'd happen, despite it probably having bipartisan support, especially amongst working class conservatives.
