Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4784
Comment on FR Doc # 2025-02305

Submitter Information

Name: Steven Doe

General Comment

"Artificial Intelligence" is one of the most annoying developments modern technology has ever spit out in to day-to-day life. The industry, propped up by speculative funding, touts magical claims that the technology is revolutionary and that it will change our lives dramatically. In its current form, the form that has existed for about five years now, it is still barely capable of summarizing an email. That's all the commercials every try to sell it to you as, too. It's not intelligent at all. It's a computer program that uses an ungodly amount of electricity to summarize emails. It's a computer program that looks at Google Image search results and blends them together in to gross-looking way-too-shiny pictures. The industry is hemorrhaging money and is on the verge of collapsing because consumers have outright rejected it. Ordinary people find it annoying, intrusive, and can't wait for it to go away. The only people championing for its continued development are suckers who bought in to it and will pull their funding the second they make a one-cent profit on their investment. This nonsense is done. The technology blends google images, summarizes emails, and sets up spam websites that make Google unusable. Generative AI should be fully banned from using copyrighted material to generate new "content," and restrictions should be placed on its development.

Predictive AI has proven useful in medical fields, allowing for early detection of Cancer and other diseases. This technology is often lumped together with generative AI, but they are not the same. If the US gov't must invest in anything, invest in the predictive. Dump generative. No more talking apps.
