General Comment

I am a US citizen and a podcast host and voice artist. This means that hundreds of hours of my voice are available online for people to listen to. I am happy to put my voice on the internet for people to listen to and enjoy, but I worry that AI companies may want to use my voice for training generative AI software without my permission. It's becoming very common to have AI companies use opt-out language for AI training, which I always do, but once my voice recordings have been downloaded and used to train AI software, there is no recourse available. I worry that these companies may want to break the rules and then ask forgiveness later. I would hope that the US, in its mission to ensure AI dominance, would not allow these companies, many of whom have foreign investors and business interests, to use American voices, writing, art, or photography to train their software without express permission. Cheating to achieve dominance in the AI field is not only un-American, it puts a dark mark on all of the AI produced here. Thank you.
