General Comment

Current models of AI are built off of petabytes of stolen artistic, academic, and commercial work, without attribution, permission, or compensation, for the entire avowed purpose of wholly replacing that work with these LLM models. Allowing AI companies to use copyrighted works, for free, at will, to provide the same services that the original creators of said works provided will have a devastating impact on the creative and academic industries, destroying entire sectors of the economy at a fragile time. You must not allow these companies the right to use these resources without compensation. These companies will say their corporate objectives cannot be achieved if they are required to compensate contributors (willing or not) fairly- to this I say: it is not the responsibility of citizens to subsidize the creation of the tools that will put them out of a job. If these companies cannot operate without society-scale theft, then they should not be allowed to operate.
