General Comment

I do not believe AI to be beneficial to our country, our industries, or humanity as a whole. Generative AI is built off of material hard working Americans have labored to create. It profits from theft and explicitly does not compensate for any material used in training AIs. It's in blatant opposition to copyright, which many business and industries use to protect their works and creations. It's a market with diminishing returns and limited use, and I believe any funding spent on AI is a waste of resources. The funds could go to dozens of other projects and industries and see far more value and use than it would going into AI. I sincerely hope that Open AI is not given the means to realize their goals, and I hope our government places its focus on more important industries and projects than AI.
