

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-y4fm-uhls
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4822
Comment on FR Doc # 2025-02305

Submitter Information

Name: Alexander Parker

General Comment

Absolutely not! Do not gut copyright and give unfettered access to private data, intellectual property, and protected arts.

I do not believe AI holds a place in the future of the US and is a snake oil technology acting as an "in" for nefarious organizations to profit off of others' hard work. AI personally steals from my livelihood as an American and directly profits off of theft. It is an unsustainable mechanism as it requires theft to function. You are ignorant if you can't see through the deception of AI as a business, it is not viable.

In order for AI to be ethical, it must compensate creators for copyrighted training data. AI-generated materials are not copyrightable. Furthermore, there are not adequate security mechanisms or laws limiting human "replacement" with AI. There is no financial or time benefit to replacing human workers with AI as the output of AI has never proven itself more valuable, more accurate, or of higher quality than human-made work.

Furthermore, the ecological impact of training AI as it currently stands consumes ludicrous amounts of resources. Whether in the form of energy, freshwater for cooling, or the manpower required to clean up the subpar output, AI is a massive net-loss.
