General Comment

I strongly advise against allowing anyone to train an AI off of material that has no basis of permission or consent. It is laughable that I even need to say this. We do not need to rescind the concept of copyright so that a few tech startups can have the totality of all creative thought for the benefit of making more money. "Unnecessarily burdensome requirements" exist to keep people's ideas in the hands of those who actually created them in the first place. As an artist, I know that my creative output is a part of me. By allowing companies to remove the guardrails on what they can train, you are shoving me into a machine that will crush the life out of my work.

If that is not enough to convince you, then please listen to this. I work in technology. I know what will happen if you let the AI Action Plan go through. Datasets will balloon in size while the large language models try to keep up. They will not be able to. The amount of training necessary for the advancement of current AI technology will not be accomplished through this effort. You know what you will get? A bunch of overworked, burnt out, and sleep-deprived programmers trying to make sense of it all. Even with all information in the world at their fingertips, they will still cut corners and take unnecessary risks. Because at the end of the day they're still a tech company. You will not make America an AI powerhouse by removing restrictions on the private sector.
