General Comment

First and foremost, this is a waste of money, time, and effort. If I have to suffer my taxes going to an 'action plan' for something both self-destructive and environmentally destructive as AI, specifically Generative AI, rest assured complaints will never cease. There is no room in the artistic realm for cut and dry copies of actual works, with no soul whatsoever, to exist. As a matter of fact, for all the effort being put into something as unhelpful as this, jobs could be created in the industry to perform at a much higher level than any AI 'action plan' could ever facilitate. I hope that whomever is charged with looking over all of these will actually acknowledge that this is unethical and unnecessary, as opposed to plugging their ears and pretending like the slop churner 6000 is such innovative technology that simply must be used in order to protect busted businesses like OpenAI from facing the consequences of stupid ass business ventures.
