Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4883

Comment on FR Doc # 2025-02305

Submitter Information

Name: Hugh McMonigle

General Comment

Artificial Intelligence, when used correctly, is a powerful tool that can be used for the public good. It can automate processes that are dangerous or time-consuming, and can increase efficiency in repetitive tasks.

But human creativity can NEVER be allowed to be automated with AI.

Artists across the world dedicate their lives to bringing us their beautiful crafts, often for very little in return. But for as little as artists are paid, it is still too much in the minds of corporations. They seek to eliminate the artist entirely by stealing not only their work, but their style. A corporation could, if AI is immune from copyright infringement claims, instruct an AI to completely copy an artist's style and produce images resembling the artist's work, effectively generating forgeries with no acknowledgement or payment to the original artist.

The corporations have made the claim that "The AI race is over" if they are not allowed to freely steal material. If that is the case, then that is a relief. We, the people of the United States, did not ask for our humanity to be boxed into a machine. We the people did not ask for our very emotions to be trivialized and copied into soulless forgeries.

If AI cannot exist without breaking copyright laws, then it should not exist. It is not your job to decide laws by how much money corporations stand to make from it. It is your job to decide laws based on what protects the people.

You cannot protect the people by allowing big businesses to steal freely from our very words and minds.

America's "AI Dominance" is not what we need right now. What we need is to own our own thoughts and feelings, and to be able to differentiate what is real from what is fake. What we need is for this AI fad to end.
