Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4887

Comment on FR Doc # 2025-02305

Submitter Information

Name: Calvin Jones

General Comment

I am not in any way convinced that AI represents in any way a economic or technological advantage, especially not generative ai which extremely inefficiently creates worse copies of extant works, often stolen without the compensation or permission of the original creators. What you're asking for here is to strip what little rights these creators even have, to defend themselves when their work is stolen and copied, to make inferior works without paying anyone involved. No amount of data fed to this machine will suddenly make it turn a profit, useful for anything besides trying to dodge actually paying someone for the labor necessary to write or make art. Loosening any of these protections is a vile action taken to try and keep the AI investment bubble alive long enough to squeeze whatever money can be before it's burst, and that's not nearly a good enough reason. The payoff to this is incredibly unlikely and minuscule, blown up way out of proportion by people who have invested an inordinate sum of money who profit the more it is bought into, the risk is destroying the already perilous careers of artists, authors, and journalists, in exchange for worse material no one went to the trouble of creating. I cannot overemphasize how poorly conceived an idea this is. The situation is already extremely bad for creators to protect the rights to their works, with nearly every platform if swarming with ai scraping software. What is needed are better protections, tighter restrictions, so to instead just tear what little exists away? An unhinged conclusion, completely devoid of any connection to reality.
