General Comment

Allowing private companies to ignore intellectual property ownership is not “unnecessarily burdensome.” AI companies have already proven themselves to be unconcerned with stealing copyright and IP ownership. Their current methods are destroying careers, destroying industries, and destroying the environment; using IP stolen from the same people whose careers they’re now destroying. This action plan will allow them to double down on their current methods with impunity.

“Private sector innovation” has been robbing the American public hand over fist because it claims that that will secure “America’s AI Dominance.” Unfortunately for all of us, we’ve been sold a lie. Not only does AI fail to live up to its lofty promises, it churns out misinformation at an alarming percentage and has made that misinformation even easier to disseminate. American AI makes us look like gullible fools who favor flash over substance. American cultural exports, such as Mickey Mouse and Marvel movies, only have the power they do because copyright guarantees that that cultural export is the same trusted product around the world.

Private sector abuse of copyright is already undermining that trust. Don’t give them permission to abuse it further. They’re actively robbing hard-working Americans who /actually/ innovate and it’s damaging America at home and around the world.

Instead of giving tech companies carte blanche to steal from Americans in the name of “AI Advancement,” these companies need to be held accountable. If they want to use intellectual property that they do not own, they need to pay for the right to use it.
