General Comment

As an artist, I believe that the power of free enterprise is one of the things that makes America great. Our glorious meritocracy allows anyone with the skills in their own hands to make at least a little money as an artist.

OpenAI, ChatGPT, Dall-E, and other such programs were not founded on the merits of their makers- they were founded on the makers' ability to steal as many copyrighted works as possible, as fast as possible. They relied on a gerontocratic Congress being too out of touch and indifferent to pass regulation fast enough. Our great country, unfortunately, does not enforce the laws against theft when corporations are stealing the work of private individuals.

If the "makers" of AI insist that the "cost" of advancing their technology is the theft of stolen images, then make them pay every cent for it. You may not know who the individual artists on Pixiv, Bluesky, or DeviantArt are, ladies and gentlemen, but you sure as hell know the New York Times. You know Penguin. You know Time magazine. They've all had their libraries of work stolen. Force OpenAI to pay them back- that's an easy start. Let's see them keep up with that cost.

Sincerely,

R. Garcia
