General Comment

AI has no place in the future of U.S. national defense or industry, and is a technology with adverse effects, no significant demand, and no viable future. Tech companies not solely reliant on the development of the technology are already divesting from AI development, and have done studies proving the harm it causes out populace.

Furthermore, theft of copyrighted content is unconscionable and will hurt the livelihood of many Americans. An industry that relies on such theft is unsustainable.

AI is already being used to impersonate, cheat, and misinform people all around the world. Removing further limitations on the technology will do nothing to solve these issues, instead exacerbating them.
