## General Comment

While generative AI's base to detect what images are, it has been useful in science and does not need the ability to recreate various forms of media such as images, video and music as well as the ability to recreate writing, code and speech.

Consent is a must for things to be created. AI needs to be controlled and used for good and constructive things. Reselling and claiming ownership of something that was generated without the consent of everyone involved is wrong in every capacity.

I believe most people want a real America, and world for that matter. We don't have a need for fake things that are easily and lazily made. Our current way of life is created on hard work and skill and without either one of these things we become mindless drones who cannot think.

In short. AI should not be developed with the intent on blatant theft. No amounts of bending the rules should be applied. AI's place in the world is for it to be a tool and not the final product.
