General Comment

Generative AI in it's current form has severe downsides as it stands; the most egregious of which being that it steals from the livelihoods of thousands of Americans for little to no gain for the end user. While it may have it's place in certain applications that would be genuinely hazardous to human life, this recent push from the developers of this technology is being perpetrated by bad actors who are seeking to bleed our people dry of our quickly dwindling resources financially.

Ask any person within a creative, legal, or customer service field and they will likely echo these sentiments as well.
