General Comment

Generative AI is the scourge of intellectual property and human creativity. It is a massive drain on the world's resources, poisons the information ecosystem of search engines with false, fraudulent, misleading and outright dangerous disinformation, and still requires human intervention to correct outright hallucinated lies, artifacts and extraneous fingers and limbs. Copyright helps protect creators who contribute to our economic growth and provide us with human stories and entertainment. If we allow AI to be trained on copyrighted works, then copyright will become pointless and moot, and might as well not exist at all, which is anathema to the entire concept of intellectual property and artistic expression. It devalues art, it steals the livelihoods and jobs from artists, musicians, filmmakers, author, every artisan who has ever created anything. Generative AI's main practical application is to create fraudulent products and enable scams.
