General Comment

AI is nothing but a detriment to human society and would wholly harm national security as well as the daily lives of ordinary US citizens if it is used for governmental purposes. It is trained off of stolen works protected by the Copyright Act of 1976 and further such laws protecting original works, and these works are stolen indiscriminately, leading to incorrect information and imperfect results, which would seriously harm national security. For example, if AI was used to detect a nuclear strike with even a slight error rate, the US may inadvertently plunge the world into World War III. In addition, the usage of AI artwork, music, or text by the Federal Government of the United States would be - and is - seen as utterly unprofessional, by both American citizens and the international stage alike. The usage of AI by any governmental agency should be strictly banned, and AI should not be allowed to train on copyright protected works.
