Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an everyday American who works as an artist and cartoonist, including in the public arts and entertainment industries. I have worked hard for years and gotten a MFA to develop the skills and knowledge to build my business, and have been lucky enough to make a decent living – until recently.

The GenAI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands of American small businesses like mine with their recent demand to create special carve outs in copyright law.

AI systems can only function by first training on work made by people. My unique work, and the work of hundreds of thousands of other everyday American creators was taken and fed into these AI systems without our knowledge, consent, or any compensation. They ingest our work, reassemble it, and then sell it back to our clients – directly competing with us and cutting us out of the marketplace. I personally have lost work due to clients who would rather have a machine imitate my style by STEALING from me first!

Now these Big Tech companies are asking this administration to create exceptions to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is somehow suddenly "fair use". They seem to believe that anything and everything on the internet – regardless of who owns it, who created it, or how personal or private that information or image is! – should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation. They are wrong.

Instead, it will have the opposite effect. The purpose of American copyright law is to protect the incentive to create and innovate, and to ensure that creators are able to benefit from their hard work.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by

Google and Microsoft, why bother creating it in the first place? Certainly why bother sharing it online? In an industry where online marketing is basically required, we will have no options for getting our work in front of people, and social media websites and the internet at large will be abandoned by creatives. How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. **Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.**

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair marketplace with competition:

- First, the government should ensure that creators and everyday Americans give effective **consent**, so that we can decide when and where our work is used by AI systems.
- Second, the AI Action Plan should encourage a robust **licensing** marketplace, so that the incentive to create for small businesses is preserved. Our work has immense economic value, so the value generated by that work should accrue to the original creators, not Big Tech.
- Finally, the AI Action Plan should require **transparency** from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated. There should be options for people to have their data deleted from these datasets if they so choose.

We should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
