General Comment

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.

Hello,

I am writing in defense of copyright protections, without which whole industries the American public benefits and profits from would face great difficulties.

I do not believe AI holds a place in the future of the US, particularly in creative industries. The results of AI are still extremely low-quality and error-prone, costly, and proven to be a turn-off to so many American consumers. We have already seen companies backing away from data center leases and other deals after seeing a lack of profit or interest by American consumers. And the amount of intellectual property you would need to feed AI to see any marked improvements simply does not exist.

Training AI steals from American livelihoods on both ends, refusing to compensate people for what they have created, and threatening American jobs and income in the future as skilled fields are devalued. It profits off of theft, and the hype surrounding it is already crashing as the initial novelty wears off.

I do not believe the American public wants more AI, and in many ways people are already going out of their way to get as far away from it as possible.

From small individual creators to massive corporations with an interest in protecting their IP, allowing AI companies to transgress on copyright (particularly without compensation) is bad for everyone. It's enabling grift, and harming the industries that make this country great.

Thank you.
