General Comment

Did you know that AI steals from the livelihood of creatives in a variety of fields — graphic designers, animators, movie producers, authors and historians, and more? It poisons the internet with false information and reduces the education and literacy levels of Americans; and it sets the stage for malicious individuals to spread illegal and immoral content such as fabricated pornography.

Of course, there should be disambiguation here, as many Americans and I refer to generative AI which OpenAI is included in. Such technology engages in immoral data-scraping to generate subpar imagery and texts. And this technology also heavily damages the environment. Many professionals in technology are also coming to terms with the realization that the general public dislikes this technology; generative AI is NOT profitable, and companies need to understand how much their latest updates have been counterproductive to serving their customers.

Why should we destroy the longstanding laws of copyright by allowing OpenAI to trudge and drag its muddy feet into clean waters? What should be an actual concern for national security is allowing OpenAI and generative AI to spread more falsehoods and fabrications, destroying our abilities to tell true from false.
