General Comment

AI systems can only be produced by training work made by real humans. The work of creators are being feed into AI systems without consent or compensation. Unregulated AI will hurt creators from small to big. It is not "fair use" when an AI generator takes copyrighted work without consent and compensation and uses it to train its system. A system that allows individual creators an option to give consent or not in using their creations to train AI is necessary to protect individuals. Companies should also provide transparent reports disclosing AI content and how the AI was trained.
