General Comment

I am an employee of a multi-billion dollar entertainment company. As with many similar companies, IP and copyrighted materials are core to the continued growth and success of the company. If other companies and organizations were able to now freely train AI models on our proprietary content and data, it would undercut the growth and success of both my employer and countless other US businesses, devastating entire industries. AI is a major scientific and technological breakthrough that America must leverage to remain at the forefront of technological innovation. However, we must be cautious to not cause irreparable damage in the process. I strongly advise against weakening and dismantling copyright and IP protections in this process. While such action would likely yield short-term gains for AI, the cost to other industries would be far too great. To ensure strong American economic growth and jobs for American citizens, we must find a different path towards growing our development of Artificial Intelligence.
