General Comment

OpenAI and all AI startups are essentially con jobs propped up by speculative markets. We've seen this same phenomenon the last couple of years with cryptocurrency and NFTs. The companies are promising things that are not true and cannot be true--there will never be "general AI," and many of the supposed applications for this technology in, for example, national security, are unreliable at best and actively harmful at worst. It is painfully easy to exploit AI algorithms, and incorporating them into law enforcement will only make it easier for criminals to get away with murder.

As a writer, OpenAI exploits my work without permission. This is bad for my business. It is bad for the American economy. It is bad for national security, law enforcement, small businesses, academia, and every level of government. If we continue to let AI companies do as they please, it will be disastrous for the economy when this bubble inevitably pops.
