General Comment

I speak as an artist in the illustrative works, commenting on the Artificial Intelligence Action Plan that seeks to provide OpenAI with the ability to train their LLMs (Large Language Models) on copyrighted materials (or rather pieces of art) regardless of the copyright holders' consent.

I am writing this to ask for the US government to drop this plan. OpenAI's business is built on the theft of the creative work of countless artists and to give them the right to steal in impunity would only be disastrous for these same artists who already face great hardships. The generative AI business in general is a speculative bubble rife with overhype, data security concerns and false promises on top of fleecing the American public's eyes. Instead, companies like OpenAI should be obligated to compensate artists for the theft of their work while making sure the images produced by LLMs cannot be copyrighted materials themselves (it'd be hypocritical and dangerous that GenAI companies can steal copyrighted artworks while using copyright to protect their businesses).

GenAI has no place in the US government and society. Thus I respectfully say that this plan must be abandoned.
