General Comment

Artificial Intelligence (AI) software and technology as it stands can only "Improve" by scraping information, values, and data from privatized and copyrighted material. This should speak leagues about how desperate and nonsensical the current form of AI technology is at the moment, where even with the endless depths of human creativity and knowledge, the only way to improve upon this AI technology is by downloading MP3's and DVDs off the web and then to scrape those illegal downloads for data and tokens so they can be repackaged as something new. Essentially, you can think of it as making a "Frankenstein" monster, using bits and pieces of content already made to make something similar to it, with out crediting or paying the creators of the source.

Back in 2010, there were a privy of laws saying, "You can't download music or movie for free off the internet" and doing so could land you in hot water. These laws still exist. So if these AI developers want to use "Shrek 2" and Metallica's album, "Master of Puppets" they should be forced to pay for rights to use these as data sources for their AI software. They should also be forced to pay for all the data they have already taken from others as well, from small artists to major producers, as that is the only right thing to do.

If they will not and won't, then they should not be able to use any material they do not legally own and should destroy any work they have created using these illegal possessions and destroy them.

Overall, this request should denied entirely. Not only would it steal copyrighted data and content with out any reprecussions, it would also put people who's job it is to create art, writings, and reports at risk.
